DrillView NVR

Driller's Video Management Software (VMS) for 4+ IP Cameras

DrillVision™'s DrillView NVR is field proven with hundreds of installations around the world. Typical Driller's configuration is 4-6 cameras where live and recorded video can be viewed and controlled on local DrillVision™ touchscreen monitors or remotely on our remote viewing software. The software can record video and audio data over a TCP/IP network. In addition, the software has many other functions such as capacity of up to 32 channels of video, video analytics (such as people counting, face detection, missing object detection, and object tracking), and integration with Access Control.
