Industrial Rack Mount Server

Time Tested, Proven Performance

DrillVision™'s Industrial Rack Mount Server is a tough, intelligent IP video recording server that has a proven track record with hundreds of installations around the world. Unlike our hardened server, this unit is designed to fit in an optional wall rack in an air conditioned environment. Servers are custom built to each project's needs. Server hard drives can be added for the storage of captured video images for later viewing. Servers require our DrillVision VMS Software which can handle up to 16 cameras with the base product.
